

High-level Design

1

Overview

- What is software architecture?
- Classic architecture styles
- UML Package Diagram
- How to do architecture design?

N. Meng, B. Ryder

2

2

What is Software Architecture?

- "The architecture of a system is comprehensive framework that describes its form and structure -- its components and how they fit together"
--Jerrold Grochow

N. Meng, B. Ryder

3

3

What is Architectural Design?

- Design overall shape & structure of system
 - the components
 - their externally visible properties
 - their relationships
- Goal: choose architecture to reduce risks in SW construction & meet requirements

N. Meng, B. Ryder

4

4

SW Architectural Styles

- Architecture composed of
 - Set of components
 - Set of connectors between them
 - Communication, co-ordination, co-operation
 - Constraints
 - How can components be integrated?
 - Semantic models
 - What are the overall properties based on understanding of individual component properties?

N. Meng, B. Ryder

5

5

Architecture Patterns

- Common program structures
 - Pipe & Filter Architecture
 - Event-based Architecture
 - Layered Architecture

N. Meng, B. Ryder

6

6

Pipe & Filter Architecture

- A pipeline contains a chain of data processing elements
 - The output of each element is the input of the next element
 - Usually some amount of buffering is provided between consecutive elements

N. Meng, B. Ryder

7

7

Example: Optimizing Compiler

Compiler Structure

Compiler Optimization

[Engineering a Compiler, K. D. Cooper, L. Torczon]

N. Meng, B. Ryder

8

8

Pros and Cons

- Other examples
 - UNIX pipes, signal processors
- Pros
 - Easy to add or remove filters
 - Filter pipelines perform multiple operations concurrently
- Cons
 - Hard to handle errors
 - May need encoding/decoding of input/output

N. Meng, B. Ryder

9

9

Event-based Architecture

- Promotes the production, detection, consumption of, and reaction to events
- More like event-driven programming

N. Meng, B. Ryder

10

10

Example: GUI

The image shows a standard Java Swing dialog box with a title bar that says "Please Enter Data...". Inside the dialog, there is a green question mark icon in a square. To the right of the icon are five text input fields, each with a label above it: "accountNumber", "firstName", "lastName", "phone", and "balance". The "phone" field has a format "() -". At the bottom of the dialog are two buttons: "OK" and "Cancel".

N. Meng, B. Ryder

11

11

Pros and Cons

- Other examples:
 - Breakpoint debuggers, phone apps, robotics
- Pros
 - Anonymous handlers of events
 - Support reuse and evolution, new consumers easy to add
- Cons
 - Components have no control over order of execution

N. Meng, B. Ryder

12

12

Layered/Tiered Architecture

- Multiple layers are defined to allocate responsibilities of a software product
- The communication between layers is hierarchical
- Examples: OS, network protocols

N. Meng, B. Ryder

13

13

Variant architectures

- 2-layer architecture
 - Client-Server Architecture
 - Data-centric Architecture
- 3-layer architecture
 - Model-View-Controller

N. Meng, B. Ryder

14

14

Client-Server Architecture

- Partition tasks or workloads between the providers and consumers of service or data
- Same system, different hardware, network communication
- Thin or thick clients

N. Meng, B. Ryder

15

15

Data-centric Architecture

- A data store resides at the center to be accessed frequently by agents
- Blackboard sends notification to subscribers when data of interest changes
- Compared with event-driven architecture?

N. Meng, B. Ryder

16

16

2-layer: Examples, Pros and Cons

- Examples
 - Web-based applications, Distributed file system, version control system
- Pros
 - Low requirements for agents
 - Easy to add/change agents
- Cons
 - Blackboard can be a bottleneck
 - Data integrity

N. Meng, B. Ryder

17

17

3-layer Architecture

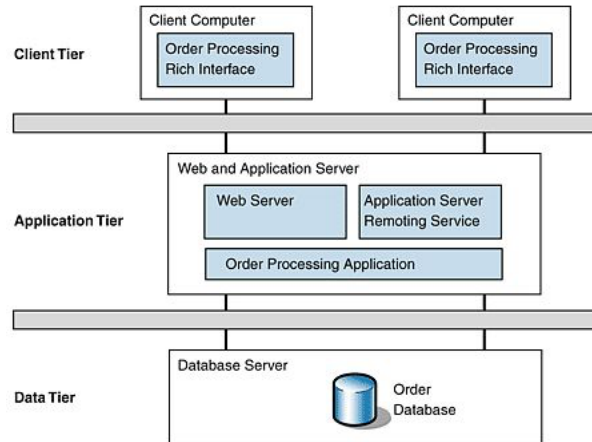

- Presentation: UI to interact with users
- Logic: coordinate applications and perform calculations
- Data: store and retrieve information as needed

N. Meng, B. Ryder

18

18

Example: Online Ordering System

<http://www.cardisoft.gr/frontend/article.php?aid=87&cid=96>

N. Meng, B. Ryder

19

19

Layered Architecture: Pros and Cons

- Pros
 - Support increasing levels of abstraction during design
 - Support reuse and enhancement
- Cons
 - The performance may degrade
 - Hard to maintain

N. Meng, B. Ryder

20

20

How to Do Architecture Design?

- When decomposing a system into subsystems, take into consideration
 - how subsystems share data
 - data-centric or data-distributed
 - how control flows between subsystems
 - as scheduled or event-driven
 - how they interact with each other
 - via data or via method calls

N. Meng, B. Ryder
