Text: J. E. Savage, *Models of Computation*, Addison-Wesley, Reading, MA, 1998; XanEdu, Ann Arbor, Michigan, 2003
(<http://www.modelsofcomputation.org>).

Topics Covered: Logic circuits, Boolean function normal forms, prefix computations, arithmetic, circuit complexity, finite-state machines, random-access machines, Turing machines, simulation, pushdown automata, regular and context-free languages, models of computability, reducibility and unsolvability, recursive function theory, parallel computation, space-time tradeoffs.

Grading: FINAL GRADE will be the average of two in-class exams ($\approx 50\%$), a final examination ($\approx 25\%$), and homework and class participation ($\approx 25\%$). All questions regarding grades must be raised within three days of the date the assignment is returned.

Final Exam: 13:05–15:05, Friday, December 7, 2018.

Honor System: The Honor System applies to this course and will be strictly enforced. See <http://www.honorsystem.vt.edu/>.
