

CS 1044 General Agreement – Summer Session 1 2002

You must complete and return this form by class on Wednesday, May 22nd, 2002.

Student ID:

Student Name (printed):

I have read the course policies and attachments, and the Computer Science Department Policy on Koofers, Old Programs, Cheating and Computer Use.

I understand that in this course, certain programming and documentation styles and standards are required on all programs written and handed in for grading. I have read the computer file backup policy for this course and realize that loss of work due to hardware or software fail is not an acceptable excuse.

I understand that it is my responsibility to be aware of any announcements regarding test dates, due dates for projects and homework, and project specifications. I understand those announcements will be made in class and posted on the web site. I understand that non-attendance does not excuse me from this responsibility.

I have read and understand the attendance and makeup policy from the syllabus.

I understand that I have one week to question the evaluation of any assignment, measured from the time that scores are released or the assignment is made available for pickup (not from the time I actually pick it up or learn my score).

I understand that none of the programming assignments or tests in this course are group assignments.

I understand that I am allowed to discuss C++ code pertaining to the programming assignments only with the course GTA(s), ACM and UPE tutors, and the course instructor. I understand that if I seek the help of any tutor (paid or otherwise), the course instructor needs to be notified first (and approval of the instructor sought). I understand that I am not permitted to seek help or other guidance from any source (on or off campus) not listed above. I understand this includes (but is not limited to) Internet Relay Chat (IRC), Internet chat rooms, WWW example software sites, USENET news groups and former students.

I understand that viewing source code written by another student in this course, or allowing another student in this course to view source code I write is a violation of the Honor Code.

I understand that submitting a homework solution or a program obtained in any way from another student is a violation of the Honor Code.

I understand that failure to abide by the Honor Code policies stated in the Course Contract are violations of the Virginia Tech Honor Code and will be treated as such.
