Course Description

• Credits: 3
• Prerequisites: There are no formal prerequisites for this course.

Purpose:

• This course provides an introduction to object oriented programming using the Java language. Fundamental concepts underlying programming and software solutions to many problems. Structured data, statement sequencing, logic control, classes, objects, methods, instantiation of classes, sending messages to objects.

Texts:

Required:

Course Notes:

• The course notes will available on-line at [http://courses.cs.vt.edu/~cs1054/fall05/](http://courses.cs.vt.edu/~cs1054/fall05/) during the week after the lecture in which they were given.

Instructor

David McPherson

Course Website: [http://courses.cs.vt.edu/~cs1054/fall05/](http://courses.cs.vt.edu/~cs1054/fall05).

This website will contain all the project specifications, homework assignments, etc. You will want to check in regularly to keep up-to-date.

Assignments

There will be a series of programming assignments aimed at further illustrating the programming and problem solving concepts that have been developed in the class. These assignments are to be completed by you, with help from no one except the course administrators, i.e. Instructors, TA’s, etc. Copying code from other sources is strictly
prohibited and is an Honor Code violation and will be treated as such. If help is needed
please come and see one of the course administrators.

In addition to the programming assignments there will be other graded assignments that
could be homework, quizzes, etc.

Additionally, there will be two tests throughout the course of the semester and a final
exam, which is schedule at a common time for all 1054 students.

The breakdown for the points on the graded material is as follows:

<table>
<thead>
<tr>
<th>Item</th>
<th>Number of Points</th>
<th>Tentative Dates</th>
</tr>
</thead>
<tbody>
<tr>
<td>Projects and Software Engineering</td>
<td>500</td>
<td>Varied</td>
</tr>
<tr>
<td>Labs</td>
<td>150</td>
<td>Weekly</td>
</tr>
<tr>
<td>Tests (2)</td>
<td>75 each</td>
<td>TBA</td>
</tr>
<tr>
<td>Other Graded Material</td>
<td>As assigned</td>
<td>Varied</td>
</tr>
<tr>
<td>Final Exam</td>
<td>200</td>
<td>7:45-9:45 am, Friday December 9</td>
</tr>
</tbody>
</table>

**Programming Projects**

The programming projects must be implemented in Java, as described in the course notes.
You may use any conformant compiler you wish, however your programs will be
compiled and testing using BlueJ.

The BlueJ environment is the only supported environment for this course. That means
that neither the TAs nor I will answer questions about the use of any other environment.
The BlueJ environment is installed on a number of Windows PCs in various computer
labs around campus. If you are using another environment, it may be advisable to test
each of your programming projects in the lab prior to submission.

All the programming projects will be subjected to runtime testing using the Web-CAT
System. See the Web-CAT homepage [http://web-cat.cs.vt.edu](http://web-cat.cs.vt.edu) for details, including the
instructions you will need in order to submit assignments to Web-CAT.

A number of the programming projects will also be graded for adherence to good
software engineering principles, including documentation, design, conformance to the
stated specification, and programming style. Each project specification will include
explicit guidelines that you will be expected to follow. The TAs will grade your (first)
submission to the Web-CAT that received the highest score, and e-mail you the results.
Note that if you make an incomplete submission (e.g., omitting required documentation)
and that receives a perfect score, then the TAs will evaluate that incomplete submission.
There will be no exceptions to this policy. If you do not make a submission for a project,
then you will receive a zero for software engineering for that project.
Labs
Every week you will participate in a lab setting where you will be exploring different aspects of Java. The labs will be intended to focus you on the skill of the week and the intended outcome is that you will gain some mastery of the topic in a controlled environment where help is available.

Tests
You must bring your VA Tech ID card to the tests and final exam! Because the tests and final exam are multiple choice and are scored via machine, also bring a number 2 pencil and a good eraser.

Other Graded Assignments
These can be anything from an in class pop quiz to homework assignments which will be graded by the TAs. You should plan on several pop quizzes throughout the semester and several graded homework assignments along the way as well.

Grading Policies
This course is largely devoted to the development of skills in structured programming, as reflected in the relatively heavy weight given to the programming assignments. You will be expected to produce programs which are not only functionally correct, but also well-structured, well-documented and readable. The Computer Science Department Documentation Standards, described in *Elements of Programming Style*, will be enforced on any programming assignments that are human-graded (a copy is included with the course notes).

Backups
It is your responsibility to maintain an up-to-date backup copy of each programming project (that is in addition to the copy you submit). The hard drives of the lab machines are re-cloned periodically, so don't try to leave a backup there! Keep a spare copy of all the relevant files for each project on a Zip disk or a CD-R in case your assignment is mislaid. (Floppy disks are notoriously unreliable.)

Late Work
Each programming project and homework assignment will have a due date and time and will include instructions for submission. Except in the very rare case that an extension is granted, late submissions will incur a penalty of 10% per day, and will not be given any credit if submitted after graded assignments or solutions have been released. Any request for an extension must be made at least 24 hours prior to the due date. Plan your time carefully for the programming projects, especially if you will be using computers in the campus labs — you may be competing with other students for scarce resources, so don't put things off until the last minute.

Note well: delays resulting from machine availability, lab schedules, hardware failures or your failure to maintain a backup of your work do not merit an extension.
Statute of Limitations
Any questions or complaints regarding the grading of an assignment or test must be raised within two weeks after the score or the graded assignment is made available (not when you pick it up).
Absences
If a serious illness prevents you from taking any of the tests, send a friend with a note describing your condition or notify me before the day of the test. Also, to establish a valid excuse for an illness you must get a note from a physician or the University infirmary. Before missing a test for any reason, you must make every effort to discuss the problem with me before the day of the test. Excuses other than an illness must be reported to your Dean's office so that they can send me a written explanation of the absence. If you need to be away for an official University event, this must be cleared with me in advance. Without a valid excuse, no makeup tests or exam will be given!

Grade Scale
Final grades will be set according to the usual 10-point scale; i.e., 90% of the total points guarantees at least an A-, 80% of the total points guarantees at least a B-, etc.

Honor Code
An exhaustive list of Honor Code violations would be impossible to present here, but among other things, each of the following is a flagrant violation of the Virginia Tech Honor Code, and violations will be dealt with severely (Honor Court):

- Working with another student to derive a common program or solution to a problem. There are no group projects in this course.
- Discussing the details required to solve a programming assignment. You may not share solutions.
- Copying source code (programs) in whole or in part from someone else.
- Copying files from another student's disk even though they might be unprotected.
- Editing (computer generated) output to achieve apparently correct results.
- Taking another person's printout from a lab printer, remote printer, trash can, etc.

It is acceptable to discuss with classmates a programming assignment in a general way, i.e., to discuss the nature of the assignment. In other words, you may discuss with your classmates what your program is required to accomplish but not how to achieve that goal using Java. In no way should the individual statements of a program or the steps leading to the solution of the problem be discussed with or shown to anyone except those people cited in the following statement.

Feel free to discuss the homework assignments and your program source code with the teaching assistants assigned to CS 1054, the instructor, or the free tutors provided by UPE. The discussion of your program source code must be limited to these people. Note that this specifically excludes discussions of your program source code with other students (even if they are not enrolled in CS 1054), or with tutors except for those named above.

Privately hired tutors are not an exception to this requirement, nor are athletic or other tutors provided by the University.

Copies of all submitted work are retained indefinitely by the Department. Submitted programs are subjected to automated analysis for detection of cheating.
If you have any question as to how the Honor Code applies to this class, remember that:

- Any work done in this class must be done on an individual basis.
- Credit will be given only for work done entirely on an individual basis.
- Do not make any assumptions as to who can provide help on a programming assignment.
- All submitted work is archived. All submitted programs will be subjected to automated cheat analysis.
- Evidence indicating the violation of the policy stated above will be turned in directly to the Honor Court.
- It is much easier to explain a poor grade to parents or a potential employer than to explain an Honor Court conviction.

**Special Accommodations**

If any student needs special accommodations because of a disability, please contact the instructor during the first week of classes.
