CS 3204
Operating Systems

Lecture 1

Godmar Back

Virginia Tech

High-level Objectives

- Learn how an OS works
  - OS are essential to everything we do with computers

- Get an inside view
  - Look at design & implementation

- Learn by doing
  - You'll code a substantial part of an actual OS

Virginia Tech
CS 3204 Spring 2006   1/18/2006   2

About Me

- Undergraduate Work at Humboldt and Technical University Berlin
- PhD University of Utah
- Postdoctoral Work at Stanford University
- Joined Virginia Tech as Assistant Professor August 2004
- Research Interests:
  - Operating systems, runtime systems and compilers: focus on building reliable systems.

Virginia Tech
CS 3204 Spring 2006   1/18/2006   3

Course Facts

- Meet Monday/Wednesday/Friday 10:10am-11:00am Pamplin 31
- Check website regularly
  - http://courses.cs.vt.edu/~cs3204/spring2006/gback
- Send class-related email to
  - cs3204-staff@cs.vt.edu
- Use CS Forum for projects
- TA: Vijay Kumar for this section

Virginia Tech
CS 3204 Spring 2006   1/18/2006   4

Email Etiquette

- Please enter your name in webmail so it appears in From: line
- Be coherent

Virginia Tech
CS 3204 Spring 2006   1/18/2006   5

Reading Material

- Required Textbook
  - William Stallings: *Operating Systems: Internals and Design Principles.* *(5th Edition), 2005*
  - Will post reading assignments:
    - Chapter 2.1-2.4 for this week

Virginia Tech
CS 3204 Spring 2006   1/18/2006   6
Class Format

- Lectures
- Exams
  - 1 Midterm
  - 1 Final (Comprehensive)
- Programming Projects

Prerequisites

- Willingness to master an intellectually challenging subject
- Knowledge of computer organization (ECE 2504)
  - Addresses, Registers, Basic Assembly Language, Memory Organization
- Knowledge of algorithms & data structures (CS 2604)
  - Solid knowledge of linked lists, hash tables, etc.
- Solid knowledge of C

Talking about C…

```
#define offsetof(TYPE, MEMBER) \
       ((size_t) &((TYPE *) 0)->MEMBER)
struct point {
    int x;               0: x (4 byte int)
    int y;               4: y (4 byte int)
    int z;               8: z (4 byte int)
    char c;                         12: c (1 byte char)
    float o;             16: o (4 byte float)   13: 3 byte padding
};
Q.: What is offsetof(struct point, y)?
           offsetof(struct point, o)?
```

Programming Projects

- 5 Projects: 0, 1, 2, 3, and 4.
- Project 0 is warm-up
- Projects 1-4 will use the Pintos operating system developed at Stanford.
- Project dependency graph

  P0   P1   P2   P3
                 P4
- Projects are different in five ways

Project Difference #1

- The Pintos projects are hard
- Expect a challenge
- About 2,500 lines of code (over the entire semester) to write
- We will help:
  - Provide tools, answer questions
  - Although Pintos is a true OS, we run it in a simulator (Bochs) → Reproducibility!
- Ask lots of questions!

Project Difference #2

- The projects are group projects
- Working in a group more closely resembles what you do outside of academia
  - Can design together, code together
  - Learn group collaboration tools (CVS version control system)
- Group members must contribute equally

Project Difference #3

- Read before you code
- We can't build an OS from scratch in a semester
  - Start with very primitive baseline code
- You must read a substantial amount of (well-written, well-documented) code before starting the projects
  - All of Pintos is about 7,000 lines
  - Must intimately understand probably 500-1000 lines, will be introduced gradually
  - Welcome to read all nitty-gritty details

Project Difference #4

- Only 50% of your grade comes from test cases
  - All test cases are public
- 50% is given for design & documentation
  - Requires design documents
  - Explain your design rationale
  - Create maintainable code, of "peer review" quality
  - Will grade on code quality

Project Difference #5

- We use C, not C++
- Note: C is a subset of C++
- Don't have virtual methods, don't have templates, don't have rtti
- Still use object-orientation, still use encapsulation
- Most OS are written in C, not C++.

Late Policy

- No late submissions will be accepted.
- Instead, you have 4 late days:
  - Self-granted extensions, no need to ask for permission
- Contact instructor in extraordinary circumstances only
  - Job interviews do not count

Grading

- 15% Midterm
- 30% Final
- 55% Projects
- *These may be subject to change*
- Not grading on a standard scale:
  - Median will divide B- and B.
- Additional stipulation:
  - Must pass all tests of Project 2

Honor Code

- Will be strictly enforced in this class
- Do not cheat
  - Observe collaboration policy outlined in syllabus
- Will use MOSS for software cheating detection
  - Do not borrow code from other offerings
  - Follow collaboration policy
- Read all policies posted on the website
  - "I was not aware…" is no excuse
- If in doubt, ask!

Acknowledgements

- Will draw in lectures from
  - Stallings's book
  - And other texts, in particular Silberschatz, Galvin, Gagne's: *Operating Systems Concepts* (Dinosaur book) & Tannenbaum's *Modern Operating Systems*
  - Course material created in other courses using Pintos
    - E.g., CS140 @ Stanford, CS 326 @ U San Francisco
  - Course material created by McQuain & other VT instructors
  - And other sources
