

Remember Tree Intro

- Various designs
- Different nodes than in a linked chain
- Use Recursion
- Find height, find number of nodes

Binary Search

- Remember how it is done with sorted arrays?
- How about 'searchable' trees?

Binary Search Tree

Special case
of a binary tree

ex:

Algorithm for search

bst Search (tree, target)

if tree is empty
return false

else if node contains target value
return true

else if target < node value
return bst Search (left subtree, target)

else if target > node value
return bst Search (right subtree, target)
