

CS5114 Spring 2010 Homework Assignment 4
Due Thursday, February 18 at 11:00pm
50 points

1. Manber 6.25
2. Manber 6.30
3. Using a findpivot function of `pivot = (i+j)/2` (where `i` and `j` are the subarray bounds), provide a permutation of the values 0 to 7 that yields worst case behavior for Quicksort. Explain how you came up with this permutation.
