

# **CS5704: Presentation of Experiences with Development Methodology (Homework 4)**

## **Due Date**

Week of Dec 1, 2008

## **Type of Deliverable**

This is a team deliverable. Each team should produce one presentation describing entire team's experiences. It is not necessary for all team members to participate in the actual presentation.

## **Deliverable Content**

Depending on the development methodology you have adopted, the presentation should include a description of process-level experiences. Particularly:

- Very brief description of the methodology you used in your team, and how you instantiated it (e.g. what roles did each team member play to get this methodology to work for this assignment, how did your team handle or implement particular aspects of your methodology, etc.)
- Based on this assignment, how do you classify your overall project experience (e.g. successful, somewhat successful, challenged)
- Description of issues that led to your assessment (e.g. things that worked, and things that did not, and why)
- Based on your experience, comment on how your assessment of this methodology would change if you were given a non-trivial development assignment (in other words how does your methodology scale to larger more complex projects?)
- Share any insights from your experiences to real-world developers.

## **Format of Deliverable**

Prepare a presentation to last for 25 minutes followed by another 10 minutes for questions and discussions.

## **Submitting the Deliverable**

Please email the instructor a digital copy of your presentation before end of week.
